

Energy costs are skyrocketing! Cut cooling costs, extend the life of airconditioning equipment while reducing your carbon footprint with EPDM Coatings.

Reflect solar radiation instead of absorbing it. Our roof coatings significantly reduced roof surface temperature of this built up roof. The coated area is cooler by 66.8 degrees.

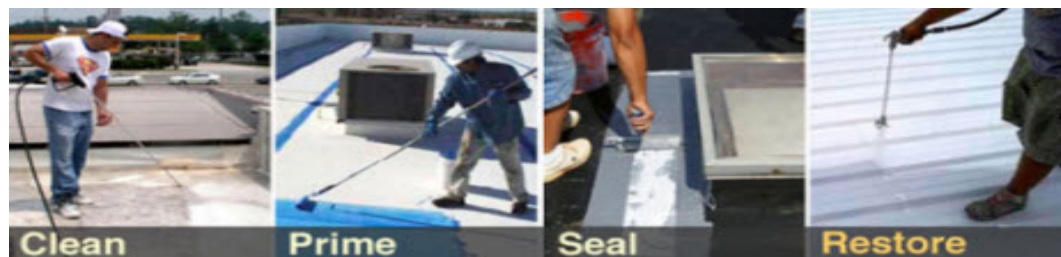

Approximately 11 million tons of asphalt roofing waste ends up in US landfills each year. Discarded roofing comprises about 7% to 10% of total landfill waste. Our Coatings extended the life of this roof and prevented about 80,000 square feet of asphaltic roofing material from being dumped in landfills.

Solve Persistent Roof Leaks

Reduce Cooling Costs

Avoid Costly Re-Roofs

Lasts 10 Years

Old Roofs Don't Just Die ... They Get Reborn.

When your roof is nearing the end of its useful life, roof replacement is not the only option for you.

We can make rusted, weathered and leaky roofs look and perform like new again. Replacing an entire roof can take weeks. Roof restoration with Our Coatings can be done in a fraction of the time without wreaking havoc.

Pressure Washing

Entire roof is thoroughly cleaned to remove dirt and debris.

Priming

PrimeLock® primers ensure adhesion of EnergyGuard® topcoats.

Sealing

All fasteners, seams, penetrations sealed with SeamStitch®.

Topcoating

EnergyGuard® topcoats dries to form a seamless watertight membrane.

WHAT'S YOUR ROOF TYPE?

EPDM Coatings can be used to restore almost any type of roof.

On a tight budget?

Save up to 50% over re-roofing.

Our roof coating system is installed over your existing roof. There are no expensive tear offs and disposal costs associated with it.

Pulling your hair out over a roof leak?

No sweat.

Seamless roof coatings solve annoying roof leaks for good.

Too busy to shut down?

No problem.

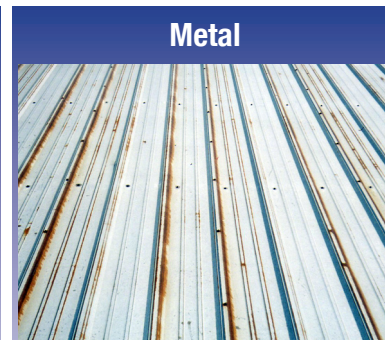

Roof restoration is done with little or no disruption to your operations.

Built Up

Built Up roofs have good waterproofing characteristics but suffers a loss of ductility after prolonged exposure to UV.

Metal

Metal Roofing is durable but older profiles with exposed fasteners and seams are prone to leaks.

Modified Bitumen

Membrane degradation due to exposure to chemicals, oils and UV is a concern.

Polyurethane Foam

Polyurethane Foam is easily damaged by UV exposure and deteriorates immediately if left uncoated.

Single Ply (EPDM, PVC, TPO)

Single ply roofs do not have the redundancy of multi-ply roofs such as built-up or modified bitumen.

Will it last?

How about 10 years. And it's renewable!

Your professionally applied Our roofing system is warranted for 5 to 10 years and can simply be recoated if needed.

How can a white coating be green?

Two words. Energy savings.

Multiple studies have shown that reflective roof coatings like EnergyGuard® can reduce roof surface temperature up to 90%. This translates to significant savings on cooling. Need more proof? Turn the page.
